

YOU SHOULD CONSIDER THIS:

Motivation for IT security

You should protect: enterprise-critical and entrusted data from the customers. Your Resources and ofcourse your good reputation in addition to the law situation (KonTraG), which has become meanwhile explicit.

Requirements to IT Security

Implementation of your individual safety requirements and integration of the IT Security in the business processes.

High costs – often due to safety lack

Working time for the removal of system attacks, monitoring, re-establishment of data costs your money. But usually still higher are the demands for payment of damages and last but not least the image loss.

IT Security is worth its money

We analyze your safety needs and make sure that we produce and implement an optimal security concept. Administration, regular maintenance and actualization are a matter of course to us.
